

The Smarter Choice is Buteline.

PEX - Brass Sliding Sleeve / Crimp Systems

- Bulky joints & more parts required - Rings
- Brass body
- Brass - Heavy to handle
- In contact with water – not hygienic
- Not environmentally friendly

Sliding sleeve – takes longer to connect each joint, time is money!

Brass crimp – loose rings falling off - costs you time and money

Pipe flaring tool required = \$\$\$

Sliding tool required for brass sleeves = \$\$\$

Smaller internal bore - poorer flow rates than PB

Rigid coils, watch out for “bird’s nesting”!

Weaker pipe - does not hold as much strength as PB in situations with continuously applied stress.

Standard brass fittings range since day one...

Countless copies available in the market with some systems not time proven yet... warranty, liability support - will these be available in the future?

VS

Buteline PB Plumbing System

- ✓ Slim-line - One piece fittings with pre-attached clamp rings
- ✓ Polymer - Lightweight
- Metal Free
- Environmentally friendly
- ✓ Quicker to install (clamp system)
- ✓ Better tooling options: - Cheaper
- Lighter / more compact
- Great tool for tight areas
- ✓ Stronger pipe and better flow rates, less material required during manufacturing compared to PEX
- ✓ Stronger pipe - after 10 years' exposure to continuously applied stress at 70°C, Bute PB pipe retains 40% more strength
- ✓ Flexible pipe in coils, easier to handle
- ✓ Growing range of innovative fitting solutions designed to make it easier for you - saves you money!
- ✓ Company and product established since 1980, international business, installed around the world with a 25 year warranty.
